DETAILED ACTION

1. Claims 1-16 are pending in this application after the amendment submitted 16 May 2005. Claims 6, 7, 9, and 14 are withdrawn. Claims 15 and 16 are new.

Drawings

2. The drawings received 16 May 2005 are acceptable for examination purposes.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3, 11-13, and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Nobuta et al. (U.S. Patent No. 6,869,731)

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Art Unit: 1745

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Nobuta teaches an electrochemical cell, such as a secondary battery, comprising a positive electrode and a negative electrode facing each other in an electrolytic solution via a separator and a proton-conductive polymer, which is an active material of an electrode in the positive electrode (indole-based) and in the negative electrode (quinoxaline-based) in which only a proton participates in a charge/discharge, wherein the electrolytic solution containing a water-soluble N-containing heterocyclic compound in organic or inorganic acid electrolyte. The N-containing heterocyclic compound is contained in the proportion of 1-80% by weight to 100% by weight of an electrolyte (Col. 2, ll. 59-62; Col. 5, ll. 1- Col. 6, ll. 3; Claim 5).

Allowable Subject Matter

5. Claims 4, 5, 8, 10, and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: Applicant elected (23 December 2004) the following species: in claim 1, the nitrogen-containing heterocyclic compound, in claim 5, imidazole with all R groups being hydrogen. The prior art of record does not teach or suggest an electrode material comprising this elected group. Since claims 4 and 5 are in Markush group format,

Art Unit: 1745

Examiner has continued searching the non-elected species. The prior art of record fails to teach or suggest the non-elected compounds as components of an electrode material. However, as discussed below, the generic claim and other dependent claims are not found allowable.
